

You need:

- 40 counters (20 in one colour, 20 in a different colour)
- 1 – 10 dice

Stack 'em up for 8

 A game for 2 playersNo Pens Day
Wednesday28 September
2011

- Choose who will have which colour counters.
- Take turns to roll the dice and multiply the dice number by 8.
- If you answer correctly, place one of your counters in the box under the answer.
- If there is already a counter in the box (either one of your own, or the other players), place your counter on top of the pile.
- Whoever's colour counter is on top 'owns' the pile.
- Keep going taking turns until each player has put their 20 counters in the boxes.
- Each player then carefully removes all the piles where the top counter is their colour.
- Each player then counts how many counters they have altogether (of both colours).
- The winner is the player with more counters.
